Have you ever seen live animals? Have you ever thought about where they live?

Some animals live on land. Some live in water. Some live both on land and in water.

Have you ever thought about where whales live? Whales live in the sea.

The sea gives whales what they need to live. They swim under the water and only come up for air.

Have you ever seen where bees live?
Most bees live inside a hive.

Bees go outside in the day and buzz from plant to plant. Plants give them what they need to live.

Have you ever thought about where rabbits live? Most rabbits live in holes.

Rabbits are safe inside their holes.
Some bigger animals eat rabbits. Bigger
animals can't go in the holes because
the holes are too little. The rabbits hide
inside until it is safe to come out.

Have you ever seen where bats live?
Many bats live inside caves.

Most bats do not come out in the day.
They only come out when it is dark.

Have you ever thought about where seals live? Seals live on land and in water.

Seals spend much of their time in the water. Sometimes they come out to rest.

Where do you live?
What is it like inside your home?
What does your home give you that
you need to live?
